; Sequence 4, Application US/08804372A
; Patent No. 6183753
; GENERAL INFORMATION:
; APPLICANT: Cochran, Mark D.
; APPLICANT: Wild, Martha A.
; APPLICANT: Wild, Martha A.
; TITLE OF INVENTION: Recombinant Chimeric Viruses and Uses
; TITLE OF INVENTION: Thereof
; TUMER OF SEQUENCES: 32
; CORRESPONDENCE ADDRESS:
; ADDRESSEE: Cooper & Dunham LLP
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: Patentin Release #1.0, Version #1.25
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/362,240A
FILING DATE: Dec-22-94
CLASSIFICATION: 435

US-09-082-253-2

i Sequence 2, Application US/09082253

i Patent No. 6004756

GENERAL INFORMATION:

APPLICANT: WATSON, MARK A.

APPLICANT: FLEMING, TIMOTHY P.

TITLE OF INVENTION: MAMMARY-SPECIFIC BREAST CANCER PROTEIN

NUMBER OF SEQUENCES: 13

CORRESPONDENCE ADDRESS:

ADDRESSE: ROGERS, HOWELL & HAFERKAMP

STREET: 7733 FORSYTH BOULEVARD, SUITE 1400

CITY: ST. LOUIS

STATE: MISSOURI

COUNTRY: USA

I COMPUTER: BADDABLE FORM:

MEDIUM TYPE: Floppy disk

COMPUTER: IBM PC compatible

OPPERATING SYSTEM: PC-DOS/MS-DOS

SOFTWARE: PatentIn Release #1.0, Version #1.25

CURRENT APPLICATION NUMBER: US/09/082,253
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Length 93;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 6, Application US/08821451A
| Patent No. 6066724
| Patent No. 6066724
| GENERAL INFORMATION:
| Jan Ni, Guo-Liang Yu and Reiner Gentz |
| TILLE OF INVENTION: Human Endometrial Specific Steroid: TITLE OF INVENTION: Binding Factor I, II and III |
| VUMBER OF SEQUENCES: 27 |
| CORRESPONDENCE ADDRESS: ADDRESSEE: CARELLA, BYRNE, BAIN, GILFILLAN, ADDRESSEE: CECCHI, STEWART & OLSTEIN |
| STREET: 6 BECKER FARM ROAD |
| CITY: ROSELAND |

Sequence 1555, Application US/09471276

Patent No. 6822072

GENERAL INFORMATION:
FAPPLICANT: Dunas Milne Edwards, J.B.
APPLICANT: Dunas Milne Edwards, J.B.
APPLICANT: Giordano, J.Y.
TITLE OF INVENTION: Expressed Sequence Tags and Encoded Human Proteins.
Patent No. 6822072

FILE REPERENCE: GENSET.025CP1

CURRENT APPLICATION NUMBER: 08/09/471,276

CURRENT PILLING DATE: 1999-12-21

EARLIER APPLICATION NUMBER: 09/057,719

EARLIER PILLING DATE: 1998-04-09

EARLIER PILLING DATE: 1998-04-08

EARLIER PILLING DATE: 1998-04-28

EARLIER PILLING DATE: 1998-04-28

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 2, Application US/08821451A
Patent No. 6066724
GENERAL INFORMATION:
APPLICANT: Jian Ni, Guo-Liang Yu and Reiner Gentz
TITLE OF INVENTION: Human Endometrial Specific Steroid-
TITLE OF INVENTION: Binding Factor I, II and III
NUMBER OF SEQUENCES: 27
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                          APPLICANT: COLDILE, ITSCY D.

Natl. Acad. Sci. U.S.A. 99.16899-16903(2002).

-!- FUNCTION: May bind androgens and other steroids, may also bind estramustine, a chemotherapeutic agent used for prostate cancer. May be under transcriptional regulation of steroid hormones.
-!- SUBCELDUAR LOCATION: Secreted (Potential).
-!- TISSUE SPECIFICITY: Highest expression was found in skeletal muscle. Expressed as well in thymus, trachea, kidney, steroid and salivary gland.
-!- SIMILARITY: Belongs to the uteroglobin family. Lipophilin

-! FUNCTION: May bind androgens and other steroids, may also bind estramustine, a chemotherapeutic agent used for prostate cancer. May be under transcriptional regulation of steroid hormones.

-! SUBUNIT: Heterodimer of a lipophilin A and a lipophilin C (mammaglobin B) monomer associated head to head.

-! SUBCELLULAR LOCATION: Secreted (Potential).

-! TISSUE SPECIFICITY: Expressed in lachrymal gland, thymus, kidney,

Palagral Peptide prediction based on analysis of experimentally
"Signal peptide prediction based on analysis of experimentally
verified cleavage sites.";
Protein Sci. 13:2819-2824(2004).
-! FUNCTION Seems to be involved in the regulation of chemotactic
cell migration and invasion.
-! SUBCELLULAR LOCATION: Secreted.
-! TISSUE SPECIFICITY: Expressed in all tissues; the highest level of expression is detectable in lymph nodes, tonsil, cultured
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            MEDLINE-22887296; PubMed=12975309; DOI=10.1101/gr.1293003;

Sequence of Cl chain of mouse prostate steroid binding protein.";

Submitted (JUN-2000) to the EMBL/GenBank/DDBJ databases.

-!- FUNCTION: Part of prostatein which is the major secretory

glycoprotein of ventral prostate gland (By similarity).

-!- SUBUNIT: Prostatein is composed of three different peptides called

CI, C2 and C3 (By similarity).

-!- SUBCELLUIAR LOCATION: Secreted (By similarity).

-!- SUBCELLUIAR LOCATION: Secreted (By similarity).
                                                                                                                                                                                                                                                                                                         Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Buteleostomi;

-!- FUNCTION: Part of prostatein which is the major secretory glycoprotein of ventral prostate gland.
-!- SUBUNIT: Prostatein is composed of three different peptides called C1, C2 and C3. These form covalent C1:C3 (F) and C2:C3 (S) heterodimers whose noncovalent association forms tetrameric

05-JUL-2004 (Rel. 44, Last annotation update)
Prostatic steroid-binding protein C2 chain precursor (Prostatein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                S
                      -!- SUBCELLULAR LOCATION: Secreted.
-!- MISCELLANGOUS: The heterodimer can bind non-polar steroids, cholesterol and a group of small proline-rich peptides.
-!- SIMILARITY: Belongs to the uteroglobin family. Libophilin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Delaey B., Dirckx L., Decourt J.-L., Claessens F., Peeters B., Rombauts W.;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         "Rat prostatic binding protein: the complete sequence of the and its flanking regions."; Mucleic Acids Res. 15:1627-1641(1987).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         7
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Nature 298:92-94(1982).

-!- FUNCTION: Part of prostatein which is the major secretory glycoprotein of ventral prostate gland.

-!- SUBMIT: Prostatein is composed of three different peptides called C1, C2 and C3. These form covalent C1:C3 (F) and C2:C3 (S) heterodimers whose noncovalent association forms tetrameric (C1:C3/C3).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1 MKLSVCLLLVTLALCCYQAN----ABFCPALVSELLDFFFISEPLFKLSLAKFDAPPEA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        -!- SUBUNIT: Homodimer, antiparallel disulfide-linked.
-!- INDUCTION: Uteroglobin, synthesized in the uterus and lung, secreted by the uterus upon induction by progesterone.
-!- SIMILARITY: Belongs to the uteroglobin family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Biopolymers 34:773-782(1994).
-!- FUNCTION: Uteroglobin binds progesterone specifically and which affinity. It may regulate progesterone concentrations reaching the blatcoyst. It is also a potent inhibitor of phospholipase A2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Interchain (with C-90).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   epithelium of the pulmonary airways).
-!- DEVELOPMENTAL STAGE: Appears on the eighteenth day of gestation in the airway epithelium.
-!- INDUCTION: By glucocorticoids.
-!- SIMILARITY: Belongs to the uteroglobin family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           inhibitor of phospholipase A2.
--- SUBUNIT: Homodimer; antiparallel disulfide-linked.
--- TISSUE SPECIFICITY: Clara cells (nonciliated cells of the surface
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    20 96 Clara cell phospholipid-binding protein.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     MEDLINE=96069785; PubMed=7583672; Haerd T., Barnes H.J., Larsson C., Gustafsson J.-A., Lund J.; Solution structure of a mammalian PCB-binding protein in complex with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      -I- FUNCTION: Binds phosphatidylcholine, phosphatidylinositol, polychlorinated biphenyls (PCB) and weakly progesterone, potent inhibitor of phospholipase A2.
-I- SUBUNIT: Homodimer; antiparallel disulfide-linked.
-I- TISSUE SPECIFICITY: Clara cells (nonciliated cells of the surface epithelium of the pulmonary airways).
-I- INDUCTION: By glucocorticoids.
-I- SIMILARITY: Belongs to the uteroglobin family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        MEDLINE=90272398; PubMed=2349092; Hagen G., Wolf M., Suske G.; Hagen G., Wolf M., Katyal S.L., Singh G., Beato M., Suske G.; "Tissue-specific expression, hormonal regulation and 5'-flanking gene region of the rat Clara cell 10 kba protein: comparison to rabbit
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Σ.
